

SalivaProtect

Effective droplet protection for employees and customers

Those who keep enough distance from others prevent the transmission of viruses and thus protect themselves and others from transmission.

When shopping disciplined behavior is extremely important. People from different areas come together in closed spaces. Checkout areas are especially critical points.

SalivaProtect is an effective protective device that is specially designed for the use in retail.

The material

SalivaProtect is based on the construction principle of the AKuTec trolley shelters.

Proven aluminum profiles with high stability are combined with panels of 5 mm thick polycarbonate or with real glass elements. Glass is easy to clean and disinfect.

The concept

SalviaProtect has a modular structure. The load-bearing aluminum construction can be combined with the panels in such a way that protective walls are possible for almost all local conditions and dimensions.

The realization

Based on your specific information (> sheet 2), we will immediately submit a practical proposal.

Of course, you will also receive a binding offer.
